## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Shimada et al (US 2003/0054288 A1).

In Example 25, Shimada teaches (see [0283]-[0287]) a planographic printing plate precursor which comprises a substrate and a photosensitive layer, and the composition for the photosensitive layer contains a polymerization initiator (present component (B)), an addition-polymerizable compound (present component (C)), and a light-heat converting agent DX-1 of the following structure:

Shimada's compound DX-1 is also shown in present specification (pg.27) as one of preferred examples for the present compound (A). Therefore, the prior art teaches present inventions of claims 1-3.

***Allowable Subject Matter***

3. Claims 4-17 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. Shimada does not teach or suggest present undercoat layer of claims 4 and 5. Shimada does not teach or suggest present components of claims 10 and 11 being microencapsulated. Shimada does not teach or suggest present step of claims 12 and 13 for supplying an aqueous component and an oil-based ink to the exposed plate.
